GitHub: github.com/haneef3 | LinkedIn: linkedin.com/in/podilihaneef

PROFESSIONAL SUMMARY

Computer Science Engineering (Data Science) undergraduate with a strong foundation in Python, Machine Learning, Data Structures & Algorithms, and software engineering. Hands-on experience building end-to-end ML workflows: data preprocessing, EDA, feature engineering, model training, and evaluation using Pandas, NumPy, and Scikit-learn. Built AI-powered applications including a voice deepfake detection system . Familiar with REST APIs, databases, and integrating AI models into full-stack applications.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, SQL
Machine Learning: Scikit-learn, Pandas, NumPy, Data Preprocessing, EDA, Feature Engineering, Model Training, Model Evaluation
Backend: Django REST Framework, Node.js, Express.js, REST APIs
Databases: MySQL, MongoDB, SQLite
Frontend: React.js, HTML5, CSS3, Bootstrap
Tools: Git, GitHub, Joblib
Coursework: Machine Learning, Data Science, Data Structures & Algorithms, OOP, DBMS

INTERNSHIP EXPERIENCE

AI/ML Intern — MS Intern Solutions *Jul 2025 – Sep 2025*

- Developed and evaluated machine learning workflows using Python, Pandas, NumPy, and Scikit-learn.
- Performed data preprocessing, exploratory data analysis, feature engineering, model training, and evaluation.
- Applied classification algorithms and contributed to end-to-end machine learning workflows.

PROJECT EXPERIENCE

Fake Voice Detection System — *Python, Librosa, NumPy, Scikit-learn, Joblib, Django REST Framework, React.js, SQLite*

- Developed a full-stack AI-powered voice deepfake detection system that accepts uploaded or recorded WAV audio and classifies voices as genuine or potentially AI-generated.
- Implemented audio preprocessing and feature extraction using Python, Librosa, and NumPy for machine-learning-based voice classification.
- Integrated the detection pipeline with a Django REST API to provide prediction results and confidence scores through the React frontend.
- Implemented JWT authentication and persistent storage for detection history, including predicted labels, confidence scores, and AI-generated analysis.

Doctor Appointment Management System — *React.js, Node.js, Express.js, MongoDB*

- Developed a full-stack web application with authentication, REST APIs, and CRUD operations.
- Built responsive interfaces for appointment scheduling and patient management.
- Implemented role-based access for doctors and patients to manage appointments, view patient details, and track appointment status.

CivicEye AI — *React.js, Node.js, Express.js, MongoDB, Google Gemini API, Cloudinary*

- Developed the frontend of a full-stack AI-powered civic issue reporting platform with role-based dashboards for citizens, admins, and workers.
- Integrated Google Gemini API to analyze uploaded images, classify civic issues, assess severity, determine priority, and generate issue summaries.
- Developed REST APIs, authentication, complaint management, image uploads, and responsive React dashboards for end-to-end issue tracking.

EDUCATION

B.Tech — CSE (Data Science), Presidency University, Bengaluru | CGPA: 8.23 *2023 – 2027*
Class XII — Narayana Junior College, Andhra Pradesh | 86.2% *2021 – 2023*
Class X (SSC) — Narayana E.M. Medium School, Andhra Pradesh | 100% *2021*

CERTIFICATIONS

freeCodeCamp — JavaScript | HackerRank — React | HackerRank — JavaScript | HackerRank — Node.js

ACHIEVEMENTS

- Participated in IEEE Tech Week 2025 and received a Participation Certificate.
